John is saying that the SWG group will only review the noncancer analyses. We were expecting that the SWG group would review the entire dose-response section including the noncancer and cancer toxicity values (based on human and animal study results). This is indicated in the spreadsheet that Vince sent around yesterday. Are adjustments needed?

The current expectation is that these reviews will be completed by July 25<sup>th</sup>.

Regards, Barbara

Before Charlie left for vacation he asked me to have SWG review two aspects of Formaldehyde assessment:

1) dose-response modeling/RfC section: I have a reviewer for this

2) any epi modeling, which he thought was non-cancer only: does this agree with your expectations?

We do not have any potential reviewers of epi modeling in NCEA-W because Jennifer and Tom were involved in hcho and Leonid and Krista are tied up with Libby asbestos. Thus the possible reviewers I'm aware of are Paul White (IO), David Svendsgaard (NCEA-RTP), and Michael Wright (NCEA-CINC). So far, I have only contacted David Svendsgaard, and he is available.

I will await your reply and if there is no reply by Wednesday I'll contact David Svendsgaard.

Barbara and Vince did not identify any deadline in their emails - ?

Charlie also mentioned the BBDR work - Alan Sasso tells me that he has been asked to review that so I'll assume it is covered.

Before Ravi left, we discussed alternate reviewers including me and Weihsueh.
